EUROPEAN AND MEDITERRANEAN PLANT PROTECTION ORGANIZATION ORGANISATION EUROPEENNE ET MEDITERRANEENNE POUR LA PROTECTION DES PLANTES Summary sheet of validation data for a diagnostic test

The EPPO Standard PM 7/98 Specific requirements for laboratories preparing accreditation for a plant pest diagnostic activity describes how validation should be conducted. It also includes definitions of performance criteria.

	III. C. A. I. II. A. E. I. I.	
Laboratory contact details	ILVO Institute for Agricultural and Fisheries Research	
	Burg. Van Gansberghelaan 96, 9820 Merelbeke -	
	Melle, Belgium	
Short description of the test	Detection of Phytophthora kernoviae by plating	
	infected plant material and morfological evaluation the culture	
Date, reference of the validation report	2009-12-21 - F16_S09	
Validation process according to EPPO Standard PM7/98?	yes	
Is the lab accredited for this test?	yes	
Was the validated data generated in the framework of a project?		
Description of the test		
Organism(s)	Phytophthora kernoviae (PHYTKE)	
o.gams(s)	Thytophenora kemovide (Tim Re)	
Detection / identification	detection	
Method(s)	Isolation	
	Morphological	
Method: Isolation		
Reference of the test description		
As or adapted from an EPPO diagnostic protocol	yes	
EPPO Diagnostic Protocol name	PM 7/112 <i>Phytophthora kernoviae</i> (version 1)	
Name of the test	Isolation on P5ARP [H] (Jeffers & Martin, 1986)	
Is the test modified compared to the reference test	yes slight modification to the semi-selective isolation medium	
Other information		
Method: Morphological		
Reference of the test description		
As or adapted from an EPPO diagnostic	yes	
protocol		
EPPO Diagnostic Protocol name	PM 7/112 <i>Phytophthora kernoviae</i> (version 1)	

Name of the test	Morphological identification P5ARP [H]	
Other information		
Other details on the test	Morphological identification using a microscope and a checklist (F03_S10) containing the most distinctive morphological characteristics of the organism as described in Brasier et al. (2005) Brasier C., Beales P., Kirk S., Denman S. & Rose J. (2005). Phytophthora kernoviae sp. nov., an invasive pathogen causing bleeding stem lesions on forest trees and foliar necrosis of ornamentals in the UK. Mycological Reaserch 109 (8): 853-859.	
Are the performance characteristics included in the EPPO diagnostic protocol?	no	
Performance Criteria :		
Organism 1.:	Phytophthora kernoviae(PHYTKE)	
Analytical sensitivity		
What is smallest amount of target that can be detected reliably?	Two plated pieces of freshly infected leaf material out of 20 plated pieces	
Diagnostic sensitivity		
Proportion of infected/infested samples tested positive compared to results from the standard test, see appendix 2 of PM 7/98	100%. All samples that were analysed with real- time PCR gave identical results, i.e. there were no false negatives	
Standard test(s)	Real-time PCR	
Analytical specificity - inclusivity		
Number of strains/populations of target organisms tested	1	
Specificity value		
Analytical specificity - exclusivity		
Number of non-target organisms tested	5 (Phytophthora multivora, P. ramorum, P. hedraiandra, P. syringae, P. lateralis)	
Specificity value	none known	
Diagnostic Specificity		
Proportion of uninfected/uninfested samples (true negatives) testing negative compared to results from a standard test	100%. All samples that were analysed with real- time PCR gave identical results, i.e. there were no false positives	
Specify the test(s)	Real-time PCR	
Reproducibility		
Provide the calculated % of agreement for a given level of the pest (see PM 7/98)	100%	
Repeatability		
Provide the calculated % of agreement for a given level of the pest (see PM 7/98)	100%	
Test performance study		

Test performance study?	no	
Other information		
Any other information considered useful	Robustness has also been established. Participated in FAPAS proficiency testing scheme and in interlaboratory comparisons.
